

RAUCH & SPIEGEL

TECHNICAL INFORMATION

1014.3

SUBJECT: RAUCH & SPIEGEL PORSCHE® - STYLE SYNCHRONIZER RINGS

Precisely crafted in-house from the finest domestically produced alloy steels with similar specification to the originals. Carefully heat treated in a certified Aerospace, Nuclear and Mil-Spec. facility under the direct supervision of a degreed metallurgist to the same hardness as the originals. They are then cryogenically treated. Finally, they are coated with very high-purity molybdenum to create the best shifting, longest lasting synchros available. It's not hard to see why these have quickly become a big favorite with quality-conscious professional Porsche® transmission re-builders in the U.S. and Europe. Pair them up with our proven synchro gear teeth (dog rings) for an unbeatable combination of quality, performance, price and driving satisfaction!
