## New Product From RAUCH & SPIEGEL

The Mechatronic Double Vacuum Unit For  
'80-'83 Porsche® 911SC. Replacement For  
Porsche® p/n: 930.602.915.01  
Bosch® p/n: 1 237 122 763  
R&S p/n: 462.951

- Bring that 1980 - 1983 Porsche® 911SC back to life with this state-of-the-art mechatronic ignition advance / retard vacuum module! We are excited to offer an industry-first replacement product that incorporates the latest in mechatronic and materials technology to restore and improve the drivability, reliability, and performance of your 911's original Bosch® distributor.
- Enjoy faster starts, smoother acceleration, and better throttle response. All made possible by the integrated, stand-alone computer controlled motion system that seamlessly drives and monitors all vacuum-related ignition timing adjustments. We've packed a ton of great hardware and software into this tiny, precise Power House of a "vacuum can". All this in a package that weighs slightly less than the clunky original.
- No need to download an APP or waste countless hours fumbling with "tuning software" to obtain less than sub-par results. Our modules are supplied completely pre-programmed and mapped specifically for the '80-'83 911SC.
- Simply install the module on your distributor, connect the supplied weather-pack pigtail to the +12V (ignition on) and GND points on your rear fuse panel. Re-install the distributor and plug-in the module. Turn on the ignition, start the engine and set the timing to factory specs. Instructions are supplied and must be followed exactly to assure long life and proper operation.
- Each new Rauch & Spiegel vacuum module is supplied with its' own individual Certificate of Testing proving its' adherence to the factory specified curves. C.A.R.B. compliant.
